About Angion

Angion is committed to transforming the treatment paradigm for patients suffering from acute organ injuries and fibrotic diseases for which there are no approved medicines or where existing approved medicines have limitations. Angion's lead product candidate, ANG-3777, is a hepatocyte growth factor (HGF) mimetic currently being evaluated in a Phase 3 registration trial for delayed graft function in patients undergoing deceased donor kidney transplantation, a Phase 2 trial in cardiac-surgery associated acute kidney injury, and a Phase 2 trial in patients with COVID-19 related pneumonia at high risk for acute respiratory distress syndrome. Angion is also currently evaluating ANG-3070, a tyrosine kinase receptor inhibitor for the treatment of fibrotic disease, in Phase 1. Additionally, Angion has preclinical programs for a rho kinase 2 (ROCK2) inhibitor and a CYP11B2 (aldosterone synthase) inhibitor. For more information, please visit www.angion.com.
